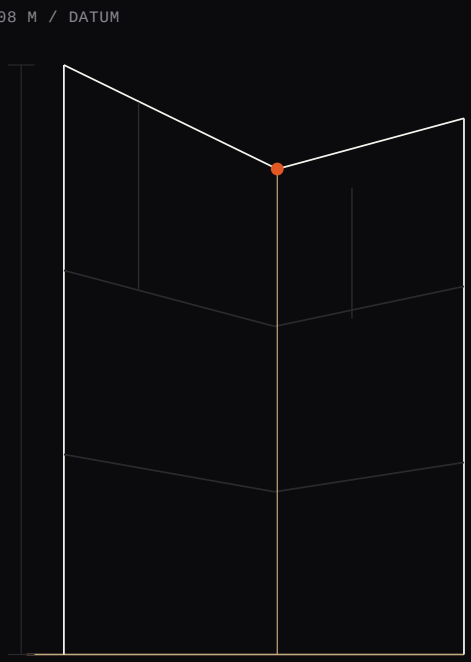
MONOGRAPH 2026 / STUDIO POSITION

We sculpt monolithic space through precision.

A working manifesto on matter, climate, and time.

Operating between Zurich and Kyoto, KROMA engineers public institutions, cultural pavilions, and private residences that honor geographical terroir and stand for generations.



MASS STUDY / 01

FORM FOLLOWS FIELD CONDITIONS.

Structure is not applied to place; it is read from it.

ZURICH 47.3769 N / 8.5417 E

KYOTO 35.0116 N / 135.7681 E

PRACTICE / THREE PROPOSITIONS

The discipline of building less, precisely.

Three commitments govern each commission from first survey to final joint.

01 — **TECTONIC PURITY**

We eliminate decorative veneer. The structure itself - the load-bearing column, the tension cable, the mass of poured concrete - must serve as the final spatial ornament.

02 — **COMPUTATIONAL DAYLIGHT**

Every fenestration is calculated using bespoke solar simulation algorithms. We shape openings so that living spaces register the changing path of equinox light.

03 — **GEOGRAPHIC INTEGRATION**

A building must belong irrevocably to its coordinates. We source stone within fifty kilometres of the site and adapt roof pitches to historical snowfall metrics.

MATTER / COMMISSIONING

Matter carries the memory of place.

We begin with what the ground, forest, or foundry can offer.

01

VALSER QUARTZITE

Honed stone, hand-split at its point of extraction. Its crystalline density gives a wall the calm thermal inertia of the Alpine ground.

02

YAKISUGI CYPRESS

Charred Japanese cypress, finished by fire and allowed to weather. Grain, shadow, and protection are one continuous surface.

03

CAST BRONZE

Wax-patinated cupro-alloy, sand-cast in small foundry runs. Its oxidation is not a defect to correct but a record of contact and air.

A COMMISSION BEGINS WITH A CONVERSATION.

Share the location, intended use, and long view for your project. Our partners review every dossier within 48 hours and return with a considered next step.
